Biometric Reader Integration

Suprema BioEntry readers integrate with Keyscan systems

Suprema
BioEntry W

Suprema
BioEntry Plus

IP based biometric access control

In some circumstances, high-security access control applications are necessary. The use of traditional smartcard or proximity cards may not be suitable or sufficient.

In Q2 2016, Keyscan Aurora software will integrate with Entertech's BioConnect software system. This will enable the use of Suprema BioEntry W and BioEntry Plus biometric readers on your Keyscan access control system.

Entertech's BioConnect software promotes seamless integration and syncronization between Keyscan access control systems and Suprema's BioEntry W and BioEntry Plus biometric readers. Using a simple enrollment device to capture biometric data, you can now add user biometric templates that will be recognized by Keyscan Aurora software when authenticating credentials and/or fingerprint recognization at entry points secured by these readers.

BioEntry W and BioEntry Plus are IP based fingerprint access control devices featuring easy installation and user friendly operation. Available in both fingerprint and/or proximity card reading capability they will both function seamlessly on Keyscan Aurora supported Keyscan access control systems.

With sleek and slim designs, the Suprema BioEntryW and Plus reader lines provide the benefits of IP access control with the high-level of security provided by biometrics – the only way to truly identify a person.

Its unrivaled quality makes it an easy decision for any company looking to incorporate biometrics to your Keyscan access system.
